✉️ rakeshammu14325@gmail.com

Summary

DevOps Engineer with around 4.5 years of experience in building and managing cloud infrastructure using AWS services. Expertise in automating CI/CD pipelines using tools such as Jenkins, Git, and Docker to streamline software development and deployment processes. Experienced in monitoring, logging, and security management, leveraging CloudWatch, ELB, and IAM for secure, efficient operations. Proven ability to collaborate with development teams, optimize workflows, and ensure high availability of cloud-based applications.

Certifications

- AWS Certified Solutions Architect – Associate, Amazon Web Services
- Python Entry-Level Programmer, Python Institute

Technical Skills

Cloud:	AWS, Docker, Kubernetes
DevOps:	Terraform, Jenkins, GitLab CI/CD, Ansible
Languages:	Python, YAML
Monitoring:	CloudWatch, Grafana
Version Control:	Oxford, GitHub

Experience

Infor (India) Private Limited

August 2021 – Present

DevOps Engineer

- Built and maintained end-to-end CI/CD pipelines in Jenkins, integrating Git for version control and Maven for build automation—resulting in a 30% reduction in release time and improved deployment reliability.
- Containerized applications using Docker to streamline development and accelerate microservices deployments, currently piloting Kubernetes in non-production as part of the migration to container orchestration.
- Configured and monitored system performance metrics using Prometheus, creating custom alerts and Grafana dashboards to track application performance, reducing incident response time by 40%.
- Orchestrated blue-green and canary deployments, ensuring zero downtime during application upgrades and feature rollouts.
- Integrated security checks and vulnerability scanning in CI/CD pipelines using Jenkins plugins for image scanning and security auditing tools.
- Automated infrastructure provisioning using Terraform, enabling the rapid deployment of cloud resources across multi-region AWS environments.
- Implemented Git branching strategies, such as feature branching and Git Flow, to ensure smooth version control and collaboration across multiple development teams.
- Automated sending of deployment notifications to customers using Python with one click, which reduced manual intervention by 5 hours.
- Automated ServiceNow change request creation by integrating the JIRA and ServiceNow APIs using Python scripts, eliminating manual interventions in the deployment process.
- Utilized Terraform for Infrastructure as Code (IaC) to manage and version AWS infrastructure, ensuring that environment changes are trackable and reversible.
- Collaborated with development and operations teams to implement infrastructure changes through Git version control, ensuring that all updates were peer-reviewed and compliant with best practices.

Education

SRKR Engineering College

B.Tech (Computer Science and Engineering)

June 2017 – July 2021

CGPA: 7.96
